

Introduction to AWS Identity and Access Management (IAM)

Lab Overview

AWS Identity and Access Management (IAM) is a web service that enables Amazon Web Services (AWS) customers to manage users and user permissions in AWS. With IAM, you can centrally manage **users**, **security credentials** such as access keys, and **permissions** that control which AWS resources users can access.

This lab will demonstrate:

- Creating **IAM Users and Groups**
- Creating **IAM policies** and applying to groups
- Following a **real-world scenario**, adding users to groups with specific capabilities enabled
- Locating and using the **IAM sign-in URL**
- **Experimenting** with the effects of policies on service access

Other AWS Services

AWS Identity and Access Management

AWS Identity and Access Management (IAM) can be used to:

- **Manage IAM Users and their access:** You can create Users and assign them individual security credentials (access keys, passwords, and multi-factor authentication devices). You can manage permissions to control which operations a User can perform.
- **Manage IAM Roles and their permissions:** An IAM Role is similar to a User, in that it is an AWS identity with permission policies that determine what the identity can and cannot do in AWS. However, instead of being uniquely associated with one person, a Role is intended to be *assumable* by anyone who needs it.
- **Manage federated users and their permissions:** You can enable *identity federation* to allow existing users in your enterprise to access the AWS Management Console, to call AWS APIs and to access resources, without the need to create an IAM User for each identity.

Start Lab

Creating IAM Users

1. Sign into the **AWS Management Console**, on the **Services** menu, click **IAM**.
2. In the navigation pane on the left, click **Users**
3. Click **Add user**

4. **User Name:** user-1
5. Select **Provide user access to the AWS Management Console - optional**
6. Select the options below

Users (1) [info](#)

An IAM user is an identity with long-term credentials that is used to interact with AWS in an account.

[Refresh](#) [Delete](#) [Add users](#)

< 1 > [Settings](#)

<input type="checkbox"/>	User name	Groups	Last activity	MFA	Password age	Active key age
--------------------------	-----------	--------	---------------	-----	--------------	----------------

User details

User name

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

☒ **Provide user access to the AWS Management Console - optional**
If you're providing console access to a person, it's a [best practice](#) to manage their access in IAM Identity Center.

Are you providing console access to a person?

☐ Specify a user in Identity Center - Recommended
We recommend that you use Identity Center to provide console access to a person. With Identity Center, you can centrally manage user access to their AWS accounts and cloud applications.

☒ **I want to create an IAM user**
We recommend that you create IAM users only if you need to enable programmatic access through access keys, service-specific credentials for AWS CodeCommit or Amazon Keyspaces, or a backup credential for emergency account access.

Console password

☒ **Autogenerated password**
You can view the password after you create the user.

☐ Custom password
Enter a custom password for the user.

☐ Show password

☐ Users must create a new password at next sign-in (recommended).
Users automatically get the [IAMUserChangePassword](#) policy to allow them to change their own password.

[Learn more](#)

[Cancel](#) [Next](#)

7. For **Console password**, select **Autogenerated password**.
8. Deselect **Users must create a new password at next sign-in**
9. Click **Next**

Set permissions

Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. [Learn more](#)

Permissions options

☒ **Add user to group**
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.

☐ **Copy permissions**
Copy all group memberships, attached managed policies, and inline policies from an existing user.

☐ **Attach policies directly**
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

Get started with groups
Create a group and select policies to attach to the group. We recommend using groups to manage user permissions by job function, AWS service access, or custom permissions. [Learn more](#)

Create group

► **Permissions boundary - optional**
Set a permissions boundary to control the maximum permissions for this user. Use this advanced feature used to delegate permission management to others. [Learn more](#)

Cancel

Previous

Next

10. Click **Next**
 11. Click **Next**
 12. Click **Create user**.
 13. Finally, download the csv file to your computer containing user credentials.
- Retrieve password

You can view and download the user's password below or email users instructions for signing in to the AWS Management Console. This is the only time you can view and download this password.

Console sign-in details

Email sign-in instructions

Console sign-in URL

<https://220816069512.signin.aws.amazon.com/console>

User name

user-1

Console password

***** [Show](#)

Download .csv file

Return to users list

14. Repeat above steps for **user-2** and **user-3**

Creating IAM Groups

15. In the navigation pane on the left, click **User Groups**
16. Let's create 3 user groups
 - a) **EC2-Admin**
 - b) **EC2-Support**
 - c) **S3-Support**
17. To create the first group,
18. Click **Create Group**

IAM > User groups

User groups (0) info

A user group is a collection of IAM users. Use groups to specify permissions for a collection of users.

Filter User groups by property or group name and press enter

< 1 >

Group name	Users	Permissions	Creation time

Delete

Create group

19. **User Group Name:** **EC2-Admin**
20. Scroll down to the bottom of the page and click **Create Group**

We need to setup inline policy for **EC2-Admin** Group

1. Navigate to the newly created **EC2-Admin** Group and click on it
2. Select **Permission** tab

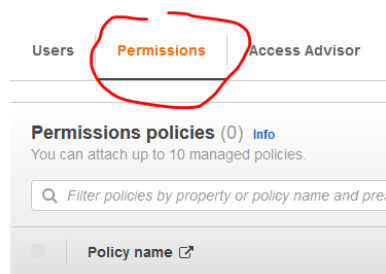

IAM > User groups > EC2-Admin

EC2-Admin

Summary

User group name

EC2-Admin

3. Click on **Add Permission**

4. Select **Create inline Policy**
5. Click on Json
6. Copy and paste the below policy in **Policy Document**
 - a) Make sure to clear out the content within the box before pasting below policy

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "Ec2:StopInstances",
        "Ec2:DescribeInstances",
        "Ec2:StartInstances"
      ],
      "Resource": [
        "*"
      ]
    }
  ]
}
```

Create policy

A policy defines the AWS permissions that you can assign to a user.

Visual editor

JSON

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Effect": "Allow",
6       "Action": [
7         "Ec2:StopInstances",
8         "Ec2:DescribeInstances",
9         "Ec2:StartInstances"
10      ],
11      "Resource": [
12        "*"
13      ]
14    }
15  ]
16 }
```

7. Click **Review policy**
8. **Name: Ec2-Inline_Policy**
9. Click **Create policy**

21. To create the second Group,
22. Click **Create Group**
23. **Group Name** EC2-Support
24. Under **Attach permissions policy** in the search bar, type **AmazonEC2ReadOnlyAccess**
25. Press **Enter**
26. Select **AmazonEC2ReadOnlyAccess**
27. Click **Create Group**
28. To create the third Group,
29. Click **Create New Group**
30. **Group Name** S3-Support
31. Under **Attach permissions policy** in the search bar, type **AmazonS3ReadOnlyAccess**
32. Press **Enter**
33. Select **AmazonS3ReadOnlyAccess**
34. Click **Create Group**

Task 1: Explore the Users and Groups

In this task, you will explore the Users and Groups that you just been created in IAM.

3. In the **AWS Management Console**, on the **Services** menu, click **IAM**.
4. In the navigation pane on the left, click **Users**.

View the following IAM Users that you created:

- user-1
 - user-2
 - user-3
5. Click **user-1**.

This will bring to a summary page for user-1. The **Permissions** tab will be displayed.

6. Notice that user-1 does not have any permissions.

7. Click the **Groups** tab.

user-1 also is not a member of any groups.

8. Click the **Security credentials** tab.

user-1 is assigned a **Console password**

9. In the navigation pane on the left, click **Groups**.

View the following groups that you already created:

- EC2-Admin
- EC2-Support
- S3-Support

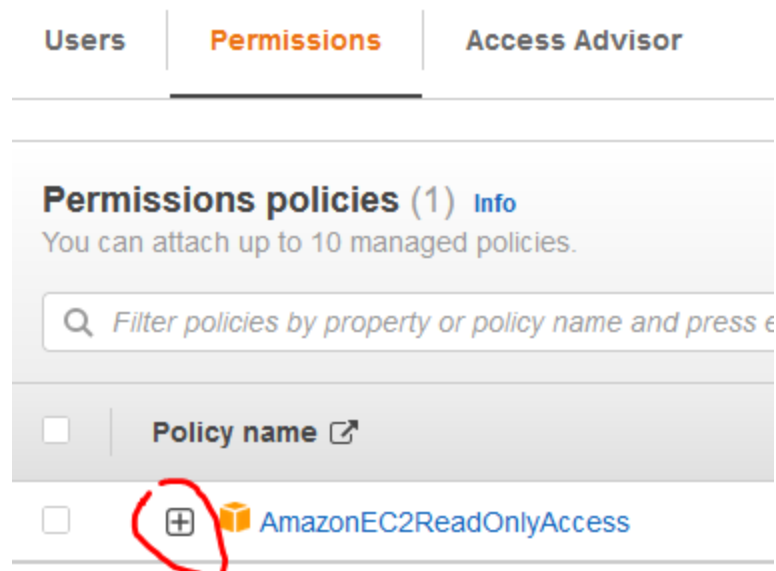

10. Click the **EC2-Support** group.

This will bring you to the summary page for the **EC2-Support** group.

11. Click the **Permissions** tab.

This group has a Managed Policy associated with it, called **AmazonEC2ReadOnlyAccess**. Managed Policies are pre-built policies (built either by AWS or by your administrators) that can be attached to IAM Users and Groups. When the policy is updated, the changes to the policy are immediately apply against all Users and Groups that are attached to the policy.

12. Click the plus icon next to **AmazonEC2ReadOnlyAccess** to show Policy

A policy defines what actions are allowed or denied for specific AWS resources. This policy is granting permission to List and Describe information about EC2, Elastic Load Balancing, CloudWatch and Auto Scaling. This ability to view resources, but not modify them, is ideal for assigning to a Support role.

The basic structure of the statements in an IAM Policy is:

- **Effect** says whether to *Allow* or *Deny* the permissions.
- **Action** specifies the API calls that can be made against an AWS Service (eg *cloudwatch:ListMetrics*).
- **Resource** defines the scope of entities covered by the policy rule (eg a specific Amazon S3 bucket or Amazon EC2 instance, or * which means *any resource*).

13. Close the **Show Policy** window.

14. In the navigation pane on the left, click **Groups**.

15. Click the **S3-Support** group.

The S3-Support group has the **AmazonS3ReadOnlyAccess** policy attached.

12. Click the plus icon next to **AmazonS3ReadOnlyAccess** to show Policy

This policy has permissions to Get and List resources in Amazon S3.

17. In the navigation pane on the left, click **Groups**.

18. Click the **EC2-Admin** group.

This Group is slightly different from the other two. Instead of a *Managed Policy*, it has an **Inline Policy**, which is a policy assigned to just one User or Group. Inline Policies are typically used to apply permissions for one-off situations.

20. Under **Actions**, click **Edit Policy** to view the policy.

This policy grants permission to view (Describe) information about Amazon EC2 and also the ability to Start and Stop instances.

21. At the bottom of the screen, click **Cancel** to close the policy.

Business Scenario

For the remainder of this lab, you will work with these Users and Groups to enable permissions supporting the following business scenario:

Your company is growing its use of Amazon Web Services, and is using many Amazon EC2 instances and a great deal of Amazon S3 storage. You wish to give access to new staff depending upon their job function:

User	In Group	Permissions
user-1	S3-Support	Read-Only access to Amazon S3
user-2	EC2-Support	Read-Only access to Amazon EC2
user-3	EC2-Admin	View, Start and Stop Amazon EC2 instances

Task 2: Add Users to Groups

You have recently hired **user-1** into a role where they will provide support for Amazon S3. You will add them to the **S3-Support** group so that they inherit the necessary permissions via the attached *AmazonS3ReadOnlyAccess* policy.

Add user-1 to the S3-Support Group

22. In the left navigation pane, click **Groups**.
23. Click the **S3-Support** group.
24. Click the **Users** tab.
25. In the **Users** tab, click **Add Users**.

26. In the **Add Users to S3-Support** window, configure the following:
 - Select **user-1**.
 - At the bottom of the screen, click **Add Users**.

In the **Users** tab you will see that **user-1** has been added to the group.

Add user-2 to the EC2-Support Group

You have hired **user-2** into a role where they will provide support for Amazon EC2.

27. Using similar steps to the ones above, add **user-2** to the **EC2-Support** group.

user-2 should now be part of the **EC2-Support** group.

Add user-3 to the EC2-Admin Group

You have hired **user-3** as your Amazon EC2 administrator, who manage your EC2 instances.

28. Using similar steps to the ones above, add **user-3** to the **EC2-Admin** group.

user-3 should now be part of the **EC2-Admin** group.

29. In the navigation pane on the left, click **Groups**.

Each Group should have a **1** in the Users column for the number of Users in each Group.

If you do not have a **1** beside each group, revisit the above instructions to ensure that each user is assigned to a Group, as shown in the table in the Business Scenario section.

Task 3: Sign-In and Test Users

In this task, you will test the permissions of each IAM User.

**** Launch a test server as root before testing**

30. In the navigation pane on the left, click **Dashboard**.

An **IAM users sign-in link** is displayed It will look similar to: <https://123456789012.signin.aws.amazon.com/console>

This link can be used to sign-in to the AWS Account you are currently using.

31. Copy the **IAM users sign-in link** to a text editor.

32. Open a private window.

Mozilla Firefox

- Click the menu bars at the top-right of the screen
- Select **New Private Window**

Google Chrome

- Click the ellipsis at the top-right of the screen
- Click **New incognito window**

Microsoft Edge

- Click the ellipsis at the top-right of the screen
- Click **New InPrivate window**

Microsoft Internet Explorer

- Click the **Tools** menu option
 - Click **InPrivate Browsing**
33. Paste the **IAM users sign-in** link into your private window and press **Enter**.

You will now sign-in as **user-1**, who has been hired as your Amazon S3 storage support staff.

34. Sign-in with:

- **IAM user name:**
 - **Password:** Paste the value of *user-1 password*
35. In the **Services** menu, click **S3**.

36. Click the bucket that has **s3bucket** in its name.

Since your user is part of the **S3-Support** Group in IAM, they have permission to view a list of Amazon S3 buckets and the contents of the **s3bucket**.

Now, test whether they have access to Amazon EC2.

37. In the **Services** menu, click **EC2**.
38. Navigate to the region that your instance was launched in by:
 - Clicking the drop-down arrow at the top of the screen, to the left of **Support**
 - Selecting the region value that matches the value of **Region** to the left of these instructions
39. In the left navigation pane, click **Instances**.

You cannot see any instances. This is because your user has not been assigned any permissions to use Amazon EC2.

You will now sign-in as **user-2**, who has been hired as your Amazon EC2 support person.

40. Sign user-1 out of the **AWS Management Console** by configuring the following:
 - At the top of the screen, click **user-1**
 - Click **Sign Out**
41. Paste the **IAM users sign-in** link into your private window and press **Enter**.

This links should be in your text editor.

42. Sign-in with:
 - **IAM user name:**
 - **Password:** Paste the value of *user-2*

43. In the **Services** menu, click **EC2**.

At the top right of the screen, enable **New EC2 Experience** by toggling the button, if it is not enabled by default.

44. Navigate to the region that your instance was launched in by:
 - Clicking the drop-down arrow at the top of the screen, to the left of **Support**
 - Selecting the region value that matches the value of **Region** to the left of these instructions
45. In the navigation pane on the left, click **Instances**.

You are now able to see an Amazon EC2 instance because you have Read Only permissions. However, you will not be able to make any changes to Amazon EC2 resources.

Your EC2 instance should be selected. If it is not selected, select it.

46. In **Instance state**, menu click **Stop instance**.
47. In the **Stop instance** window, click **Stop**.

You will receive an error stating *You are not authorized to perform this operation*. This demonstrates that the policy only allows you to information, without making changes.

48. Close the displayed error message.
 - Next, check if user-2 can access Amazon S3.
49. In the **Services**, click **S3**.
 - You will receive an **Error Access Denied** because user-2 does not permission to use Amazon S3.

50. You will now sign-in as **user-3**, who has been hired as your Amazon EC2 administrator.
 - Sign user-2 out of the **AWS Management Console** by configuring the following:
 - At the top of the screen, click **user-2**
 - Click **Sign Out**
51. Paste the **IAM users sign-in** link into your private window and press **Enter**.
52. Paste the sign-in link into your web browser address bar again. If it is not in your clipboard, retrieve it from the text editor where you stored it earlier.
53. Sign-in with:
 - **IAM user name:**
 - **Password:** Paste the value of *AdministratorPassword* located to the left of these instructions.
54. In the **Services** menu, click **EC2**.
55. Navigate to the region that your lab was launched in by:
 - Clicking the drop-down arrow at the top of the screen, to the left of **Support**
 - Selecting the region value that matches the value of **Region** to the left of these instructions

56. In the navigation pane on the left, click **Instances**.
 - As an EC2 Administrator, you should now have permissions to Stop the Amazon EC2 instance.
 - Your EC2 instance should be selected . If it is not, please select it.
57. In **Instance state**, menu click **Stop instance**.
58. In the **Stop Instance** window, click **Stop**.
 - The instance will enter the *stopping* state and will shutdown.

Conclusion

Congratulations! You now have successfully:

- Explored pre-created IAM users and groups
- Inspected IAM policies as applied to the pre-created groups
- Followed a real-world scenario, adding users to groups with specific capabilities enabled
- Located and used the IAM sign-in URL

- Experimented with the effects of policies on service access
