

**Task 1**

Client has requirement to build a static website using S3 and leveraging its functionalities.

1. Create a public static website in s3 using the html web file provided to you.
2. Encrypt the s3 bucket using AWS managed key
3. Enable versioning for this s3 bucket in a separate bucket
4. Create a s3 bucket policy for the versioning bucket allowing access to everyone within that AWS account

**Task 3**

1. Server your s3 content using CloudFront delivery network.

**Task 3**

1. Using a linux server, copy the content of the s3 bucket into the /home/ec2-user directory of that linux machine.
2. Send me picture through completing each step of this task.

*Clean up by deleting everything you have created.*
