LAB - Host a Static Website in an S3 bucket

Client has assigned you to create an S3 bucket in the Virginia region in order to host a single page web content to be accessed by few employee internally.

1. Create an S3 bucket and to host a static website. (Download the **index.html** website content file from our files directory)
2. Create an S3 bucket in the **us-east-1** region – use a unique bucket name
3. Upload index.html file into the newly created S3 bucket
4. Navigate to the **Permissions** tab and edit bucket permission to allow public access
5. Configured bucket to host static website in the properties tab - Enable Static Website Hosting
6. Select index.html within the bucket and make the file public
7. Test your static website but pasting the URL in a web Browser.

Question

1. What Protocol is use to access content in an s3 bucket?
